PIPE ORGAN BUILDERS

GOULDING & WOOD UNDERSTANDS that an instrument must serve the musicians and congregations that make music with it. Every aspect of our design is focused on providing the resources for the varying roles organists must fill:

- **OUR TONAL DESIGNS** begin with the understanding that congregational singing is the primary concern of the organ. We offer creative and comprehensive resources for the authoritative performance of literature, the nuanced accompaniment of choirs, and the imaginative leadership of congregational song. Broad scaling and clean, incisive voicing produce instruments with generous fundamental development that clearly delineate pitch while providing the organist with a wide and varied palette. Our voicer's commitment to allowing pipes to speak with their most efficient, beautiful tone matches the commitment with which congregations and choirs seek to sing together in worship.

- **OUR EXCLUSIVE SLIDER CHEST DESIGN**, with our full ten-year warranty, ensures an unsurpassed reliability and musical response to the organist's touch. In our windchests, the time-honored benefit of common key channels combines with the practicality of pneumatic mechanics that provide gentle, musically sensitive pipe speech and the flexibility of remote key action.

- **OUR VISUAL DESIGNS** sensitively complement the surroundings of the instrument while our consoles give the musician ergonomic, intuitive access to the organ's resources. Visual elements contribute richly to the liturgical experience in a room by engaging in architectural dialogue with other aesthetic themes present. Consoles offer clean, elegant workspaces that encourage clean, elegant playing. Organists find convenient and comprehensive control over the organ with generous registrational assists, yet the consoles are never cluttered or claustrophobic.

IN ALL ASPECTS, we strive to build instruments that create an ideal setting for the musician's inspiration to excel, both in worship and performance.
