

Syndyne Corporation

SOLID

For over 50 years, Syndyne has served as an essential supplier of quality products to the pipe organ industry. With thousands of control systems and millions of console components in the field, Syndyne remains a trusted partner for a majority of organ builders across the globe.

SUPPORTIVE

Syndyne is perfectly sized to serve the organ industry. We are large enough to be there when you need us, providing fast lead times, custom order fulfillment, and long term stability. Yet, we are focused enough to optimize the needs of the pipe organ industry, while providing extremely competitive pricing and a personalized touch to serve you.

STRONG

Syndyne is a family owned and operated company with core values that reflect the passionate spirit associated with the "King of Instruments." Tirelessly pursuing quality and reliability is ingrained into our progressive nature. From the first stop control Syndyne produced, to the impressive, reliable MS8400 Control System, manufacturing excellence remains our primary goal.

“ The bottom line is that the MS8400 serves organists on their level providing a simple, yet powerful experience which puts control back into their hands. ”

The MS8400 Control System

With thousands of control systems in the field, we have proven our system reliability in the face of thunder storms, floods and the long steady stress of time. The MS8400 Master System is solid, delivers impressive driving capacity, comes housed in an expandable steel chassis and features aluminum extrusion reinforced circuit boards. The communication protocol we use to connect our system was originally developed to keep airplanes in the sky and commercial trucks safely on the road. During the MS8400 development process we used extensive industry feedback and years of system history to build upon previous strengths, overcome previous weaknesses and add impressive new features. The final result; happier organists, congregations, curators, and organ builders.

The Master System is packed with incredible features and functionality, yet it is easy to install, configure and operate with no PC required. The stylish touch screen and friendly organist interface makes navigation simple. This is a major improvement over the cryptic and cumbersome displays required by other systems. However, in situations where simplicity or historical preservation is crucial, the MS8400 can be simplified even more to operate exclusively by mechanical controls and rotary switches. The bottom line is that the MS8400 serves organists on their level, providing a simple, yet powerful experience which puts control back into their hands. In doing this, we empower organists to make beautiful music on the most remarkable instrument the world has ever known, the pipe organ.
